DIGITAL TAPE EXTENSOMETER

Tape extensometer is designed to take accurate distance measurements between pairs of reference points permanently installed.

Tape extensometer is equipped with stainless steel measuring tape with equally spaced punched holes incorporated in a rugged body with digital dial gauge. Available with both hook or 3/8" threaded terminals.

Typical applications include convergence measurements of tunnel linings, according to NATM practice, and monitoring of shafts, underground openings and caverns.

APPLICATIONS

- Convergence measurements in tunnels according to NATM practice
- Displacements in underground excavations and mining
- Monitoring of rock masses
- Rotation / displacement of retaining walls

FEATURES

- Portable and lightweight
- Read relative pin distances up to 30 m
- Optical tension indicator grants repeatable readings
- Robust construction

Meet the essential requirements of the EMC Directive 2004/108/EC
